Aluminium bekleding

Een architecturaal aluminium gevelbekledingsstelsel dat een grote verscheidenheid aan ontwerpen biedt in termen van toepassingen, kleuren en texturen.

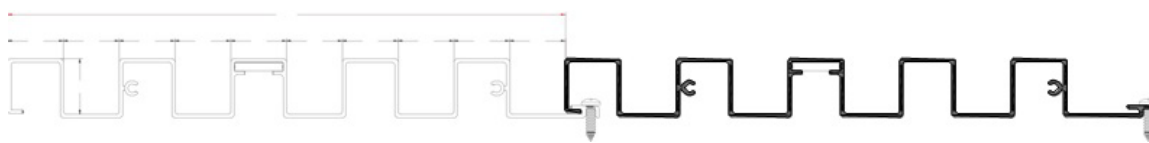

Aluminium gevelbekledingsprofielen bieden lichte, ontwerpgerichte oplossingen voor het bekleden van uitgestrekte oppervlakken, zowel aan de buitenkant als aan de binnenkant van gebouwen. Ze verbeteren de esthetiek en verhogen de energie-efficiëntie, waardoor de algehele uitstraling van gebouwen wordt verbeterd.
